Vaulted Online Backup and Recovery ServiceSM - Mobile

Why should I consider data backup for laptops and workstations?

Today, most organizations do not backup mobile user data due to inherent technical complexities, inconsistent bandwidth availability, no fixed IP address, cost to manage and maintain and due to the fact that typical laptop users are less technically savvy. However, the vast majority of laptops contain confidential customer data and corporate Intellectual Property (IP). Organizations of every size have to abide by regulatory mandates for data protection (SOX, HIPPA, PCI, GLBA, Basel II, Safe Harbor, ARRA, Patriot Act, etc.). Additionally, most organizations have corporate mandates in place to build business continuity strategies to safeguard business operations.

How can Kent Record Management, Inc. help?

In light of the above, Kent Record Management, Inc. offers Vaulted Online Backup and Recovery (V-OBRSM) Mobile software which is specifically designed to backup remote laptops in the field. V-OBRSM Mobile software enables quick backup and recovery of mobile laptops via its simple intuitive graphical user interface that is designed for novice users. Self-management enables mobile users to backup and restore their own data anytime and anywhere. Built-in data reduction techniques and the ability to mass deploy V-OBRSM Mobiles significantly reduces bandwidth, management, support costs, reduces recovery time for mobile laptop users, and improves data recovery service levels of mobile laptops.

V-OBRSM Mobile software is charged per protected GB (gigabyte). You may install V-OBRSM Mobile on as many systems as needed.

Key Features

- Platforms: Windows (see Installation and Backup & Restore Support Matrix for more details).
- Simplified installation via MSI packages and mass deployment via active-directory policies.
- On-demand and scheduled backup.
- Easy access Graphical User Interface to backup and restore.
- Comprehensive activity and event logs.
- Restores to original or alternate locations.
- Encryption: DES, AES128, AES192, AES256.
- Backup documents, video, pictures, music, and other files.

Benefits

- Data stored in actual Kent Record Management, Inc. vaults.
- Safely accommodates backup of entire contents of typical computer.
- Extremely safe data transfer and storage using up to 256-bit encryption keys.
- Notifications, messages and trap alerts to administrators and users.
- Silent mode upgrades.
- May be remotely monitored and managed.
